

What are the colors of the planets?

- Mercury is grey or slightly brownish
- Venus is pale yellow
- Earth is mostly blue and green
- Mars is mostly reddish brown
- Jupiter is orange with white stripes
- Saturn is pale gold
- Uranus is a pale greenish blue
- Neptune is pale blue
- The sun is not a planet, it is yellow

There are 8 planets in our solar system.

This is the order of the planets from the sun

- Mercury comes first (1st). It's the closest to the sun.
- Venus comes second (2nd). It's the hottest one.
- Earth comes third (3rd). It's the only life that we know.
- Mars comes fourth (4th). It has the largest canyon and volcano.
- Jupiter is fifth (5th). It is the largest planet you will find.
- Saturn is sixth (6th). It has rings around the outside
- Uranus is seventh (7th). It is funny because it spins on its side.
- Neptune is eighth (8th). It's the coldest of its kind.
